Fires highlighted in yellow have submitted a FINAL ICS-209 or will no longer meet criteria to be prioritized																	
	UT-NWS	Goshen	Full Suppression	3 mi E of Goshen, UT	372	0	100%	09/19/20	Type 2 IMT GB Team 3 Ron Bollier	0	0	0	0	0	0		Turned back to local unit.

Evening Brief

Date: Saturday September 19th, 2020

Weather Summary

The low that brought showers and cooler temperatures the past 2 days is now departing into the Midwest. Drier and somewhat warmer air moves into the Great Basin from west to east today into early this coming week, with near seasonable temperatures. However, some moisture from Arizona is expected to move north into Utah, late Monday into Tuesday, bringing scattered showers and thunderstorms to the higher terrain of southern and central Utah.

Winds will be breezy Sunday though Mon/Tue over parts of Nevada as southwest flow continues. This could bring more smoke into the region, depending on fire activity to our west.

By midweek, stronger high pressure builds into the Great Basin, with temperatures again reaching levels 5-10 degrees above late September normal. This warming trend with increasingly dry humidities, will continue into the end of the week. Afterwards, a deep low pressure system approaches the Pacific Northwest again, bringing stronger southwest winds to most of the Great Basin.

Preparedness Levels & Great Basin Fire Activity (from WFDSS)

Great Basin	PL 4	Light Initial Attack Activity
National	PL 5	New Fires and Acres: 11 fires for 152 acres. 59,138 acres Large Fire Growth

Fuels/Fire Potential

***Fuel and Fire Behavior Advisory in Effect for West ID, East NV, Most of UT and the West Arizona Strip ***

Areas of wetting rains across Idaho into Wyoming and parts of northern Nevada and far northern Utah the past 2 days, will significantly moisten fuels in those areas for several days. This moisture would have the greatest effect on fine fuels and 100-hr fuel moisture. However, larger timber fuels in some areas of Idaho may not respond significantly, depending on the amount of moisture. At a minimum, the rainfall and/or higher humidity for a couple days will be just a brief reprieve for Idaho.

Otherwise, fuels will remain critical over the southern half of the Great Basin under drier conditions. Moisture by Mon/Tue in Utah may moderate fire danger and fuels in some areas.

Live Fuel moisture in low elevation brush remains critically dry, between 60-100% in most areas, which correlates with extreme fire behavior.

Warmth and dryness during the latter part of the 7-day period could bring increased fire activity again on some of our existing fires in heavy fuels.

Resources:

Aviation within the Great Basin

- 1 VLAT, 6 LATs, 2 CL-415
- 23 SEATs, 2 FB, 14 AA, 1 ASM, 1 LP
- 9 Type 1 Helicopters / 9 Comm.
- 9 Type 2 Helicopters / 9 Comm.
- 22 Type 3 Helicopters / 20 Comm.

Crews Committed within the Great Basin

- 12 IHCs / 0 Available
- 11 Type 2IA / 0 Available
